

Supplementary Materials

Table of contents

Supplementary Table 1. Comparison of clinical parameters between participants with positive and negative results of IFN- γ ELISpot assays.

Supplementary Table 2. Spearman's rank correlation coefficient (r_s) and P -values between IFN- γ SFC numbers and clinical parameters

Supplementary Table 3a. Frequencies of HLA class I and class II alleles associated with T1D in participants with AT1D

Supplementary Table 3b. Frequencies of HLA class I and class II alleles associated with T1D in participants with KPD

Supplementary Figure 1. ELISpot assay showing SFC numbers of PPD-specific IFN- γ -producing PBMCs in the two categories of diabetes.

Supplementary Figure 2. ELISpot assay showing SFC numbers of B:9-23-, B:10-24-, B:11-25-, and B:12-26-specific IFN- γ -producing PBMCs in the two categories of diabetes

Supplementary Figure 3. ELISpot assay in participants showing SFC numbers of B:9-23rPep-specific IFN- γ -producing PBMCs according to the presence/absence HLA alleles linked to type 1 diabetes.

Supplementary Table 1. Comparison of clinical parameters between participants with positive and negative results of IFN- γ ELISpot assays

	Participants with AT1D (n=42)			Participants with KPD (n=33)		
	Positive result of ELISpot assay (n = 16)	Negative result of ELISpot assay (n = 26)	P-value	Positive result of ELISpot assay (n = 12)	Negative result of ELISpot assay (n = 21)	P-value
Demographic characteristics

Data are shown as the median (minimum-maximum). AT1D, acute-onset type 1 diabetes; BMI, body mass index; ELISpot, enzyme-linked immunospot; GADA, anti-glutamic acid decarboxylase antibody; HbA1c, glycated hemoglobin; HLA, human leukocyte antigen; IFN- γ , interferon- γ ; KPD, ketosis-prone type 2 diabetes. N.S., not significant.

^aMann-Whitney *U*-test, ^bChi-square test, ^cFischer's exact test.

Supplementary Table 2. Spearman's rank correlation coefficient (r_s) and P -values between IFN- γ SFC numbers and clinical parameters.

	Participants with AT1D (n = 42)		Participants with KPD (n = 33)	
	r_s	P -value	r_s	P -value
Age	0.274	N.S.	-0.385	< 0.05
BMI	-0.162	N.S.	0.230	N.S.
Diabetes duration	0.054	N.S.	0.081	N.S.
<i>Ad lib</i> plasma glucose	-0.045	N.S.	-0.194	N.S.
HbA1c	0.065	N.S.	0.064	N.S.
<i>Ad lib</i> serum C-peptide	-0.168	N.S.	-0.399	< 0.05

AT1D, acute-onset type 1 diabetes; BMI, body mass index; HbA1c, glycated hemoglobin; IFN, interferon; KPD, ketosis-prone type 2 diabetes; N.S., not significant; r_s , Spearman's rank correlation coefficient; SFC, spot-forming cell.

Supplementary Table 3a. Frequencies of HLA class I and class II alleles associated with T1D in participants with AT1D

AT1D (n = 84)	Positive result of ELISpot assay (n = 32)		Negative result of ELISpot assay (n = 52)		Positive vs. Negative results of ELISpot assay	
	n	%	n	%	P-value	OR
HLA class I

*15:01 and/or *15:02	4	16.7	6	14.3	N.S. ^a	1.20

ELISpot, enzyme-linked immunospot; HLA, human leukocyte antigen; KPD, ketosis-prone type 2 diabetes; OR, odds ratio; T1D, type 1 diabetes.

^aFischer's exact test, ^bChi-square test.

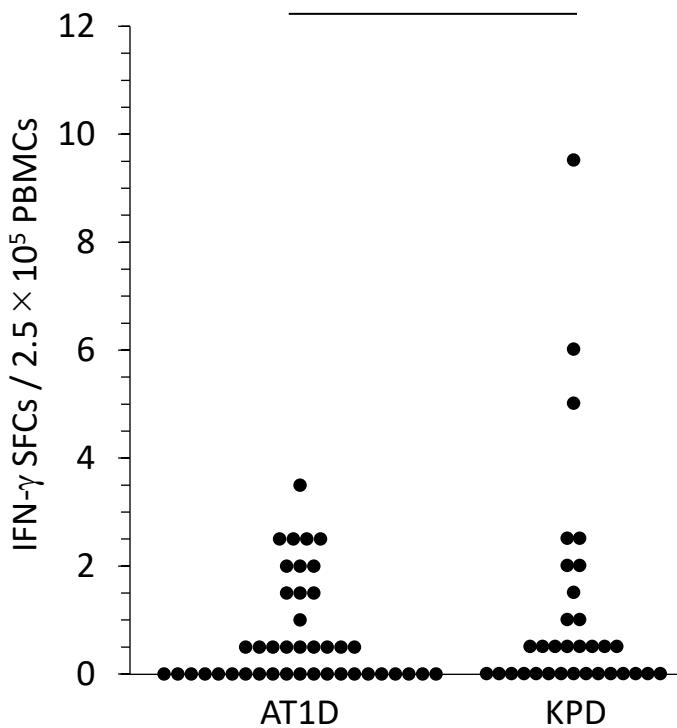

Supplementary Figure 1. ELISpot assay showing SFC numbers of PPD-specific IFN- γ -producing PBMCs in the two categories of diabetes.

Each dot indicates the number of PPD-specific IFN- γ SFCs determined by ELISpot analysis. Participants with AT1D (n = 42); participants with KPD (n = 33). *Mann-Whitney U-test.

AT1D, acute-onset type 1 diabetes; ELISpot, enzyme-linked immunospot; IFN, interferon; KPD, ketosis-prone type 2 diabetes; N.S., not significant; PBMC, peripheral blood mononuclear cell; PPD, purified protein derivative; SFC, spot forming cell.

**Supplementary Figure 2. ELISpot assay showing SFC numbers of B:9-23-, B:10-24-, B:11-25-, and B:12-26-specific IFN- γ -producing PBMCs in the two categories of diabetes**

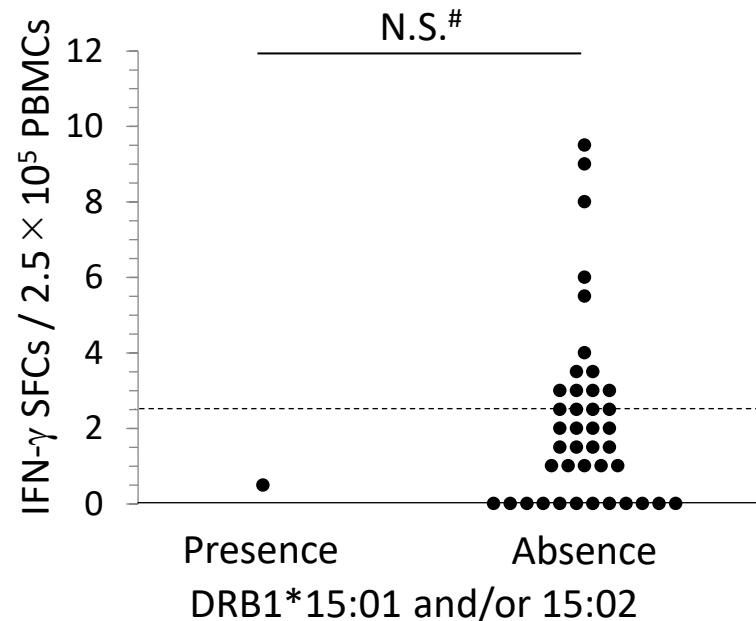

Each dot indicates the number of IFN- γ SFCs. (a) B:9-23, (b) B:10-24, (c) B:11-25, (d) B:12-26. Participants with AT1D ($n = 42$); participants with KPD ($n = 33$). *Mann-Whitney U-test.

AT1D, acute-onset type 1 diabetes; ELISpot, enzyme-linked immunospot; IFN, interferon; KPD, ketosis-prone type 2 diabetes; N.E., not examined due to zero value in the KPD participants with HLA-DRB1*08:02; N.S., not significant; PBMC, peripheral blood mononuclear cell; SFC, spot forming cell.

Supplementary Figure 3. ELISpot assay in participants showing SFC numbers of B:9-23rPep-specific IFN- γ -producing PBMCs according to the presence/absence of HLA alleles linked to type 1 diabetes.

The participants were divided into the following three categories according to presence/absence DRB1*04:05, presence/absence DRB1*08:02 and presence/absence DRB1*09:01 (**a**), the following the category according to presence/absence DRB1*15:01 and/or DRB1*15:02 (**b**), and the following two categories according to presence/absence A*02:01 and presence/absence A*24:02 (**c**), and IFN- γ SFC numbers were evaluated. Each dot indicates the maximum number of IFN- γ SFCs from participants upon stimulation with each of the four B:9-23-related peptides using ELISpot assay. Horizontal dotted line represents a cut-off value of IFN- γ SFC numbers. **Supplementary Table 1** shows the number of positive and negative results of IFN- γ ELISpot assay according to each presence/absence HLA allele. [#]Mann-Whitney *U*-test.

AT1D, acute-onset type 1 diabetes; ELISpot, enzyme-linked immunospot; IFN, interferon; KPD, ketosis-prone type 2 diabetes; N.E., not examined; N.S., not significant; PBMC, peripheral blood mononuclear cell; SFC, spot forming cell.
